

# ANCRA FACTSHEET

<b>Completed:</b>	1999
<b>Location:</b>	Amsterdam, The Netherlands
<b>Industry:</b>	Paper
<b>End user:</b>	De Telegraaf
<b>Logistic Service Provider:</b>	DistriQ Transport
<b>Type of system:</b>	Slat Conveyor System
<b>Dock systems:</b>	0
<b>Trailer systems:</b>	2
<b>Products transported:</b>	Paper reels and palletized newsprints

*"Thanks to the versatile Ancra slat conveyor system we have a fast handling of paper reels and next to this the trailer can also be used for silent unloading of palletized newsprints on location." -Gerard Jongsma, Paper reel handling DistriQ*

DistriQ Transport BV is a subsidiary of Telegraaf Media Group and transports paper reels and newspapers for De Telegraaf, a major newspaper in The Netherlands. After prior orders for the delivery of Ancra slat conveyor systems to De Telegraaf Transport BV in the past, Ancra Systems BV was chosen again to deliver slat conveyor systems for two semi-trailers. After arrival of paper reels by ship or train, the paper reels are loaded with a clamp truck into a semi-trailer equipped with the Ancra aluminium slat conveyor system, engineered for stand alone operation.

Loading newsprint paper reels with different dimensions is possible with the slat conveyor system. The slat conveyor system is directly mounted on the chassis whereby the system easily can be relocated if necessary. The 24V DC driving unit is powered by the truck's batteries and takes care of smooth (un)loading of the 30 tons load. Due to the flat floor the semi-trailer is also usable for the distribution of palletized newspapers in addition to delivery of the paper reels at the print factory.
